Problem and Objective

From manual sorting to automatic classification

Before: manual process

- Daily unclassified requests.
- Manual category selection.
- Time-consuming sorting.
- High error rate.

After: our objective

- Automatic incident classification.
- Reduced manual IT effort.
- Improved ticket routing efficiency.
- No-code maintenance.

Solution Overview

Keyword-based classification using ServiceNow Flow Designer

1

Ticket created

Student enters Caller and Description.

2

Flow triggers

Record created with empty category.

3

Keyword check

Description matches predefined rules.

4

Auto-classify

Category and subcategory assigned.

5

Email sent

Caller receives confirmation mail.

Result: Consistent classification, zero human error, reduced manual workload.

Project Execution Phases

1. Ideation Phase
Problem identification.

2. Requirements
Gathering system needs.

3. Project Design
Solution fit template.

4. Project Planning
Mapping workflows.

5. Development
Building Flow Designer logic.

6. Documentation
GitHub submission deliverables.

Problem-Solution Fit

Aligning our automation with IT realities.

DESIGN PHASE

CUSTOMER SEGMENT

School IT Administrators

Managing high volumes of basic tier-1 requests daily.

JOBS TO BE DONE

Rapid Issue Triage

Sorting Wi-Fi, projector, and password resets efficiently.

EXISTING BEHAVIOUR

Manual Ticket Reading

Reading descriptions to assign categories by hand.

OUR SOLUTION

Automated Flow Routing

ServiceNow parses keywords to auto-assign categories.

Project Planning Phase

Product backlog, sprint schedule, and estimation

PLANNING PHASE

Epic	User Story / Task	Priority	Pts
Registration	Register via email and password	High	**2**
Registration	Receive confirmation email	High	**1**
Registration	OAuth (Facebook / Gmail)	Med	**4**
Login	Login via email and password	High	**1**

TARGET VELOCITY

20

Story points / sprint

Based on 10-day sprint at 2 points per day.

SPRINT 1 TRACKER

Duration	**6 Days**
Start Date	**24 Oct 2022**
Completed	**20 Points**

Technical Implementation

No-Code Configuration

- **ServiceNow Flow Designer**
  Visual workflow builder replacing complex scripting.
- **Condition-Based Triggers**
  Executes only when Category and Subcategory are empty.
- **Automated Action Records**
  Directly updates Incident table fields without user prompt.

Workflow Logic

If **Short Description** contains *"Wi-Fi"*

Then set **Category** to *"Network"*
and **Subcategory** to *"Wireless"*

Classification Rules Matrix

Keyword Detected	Assigned Category	Assigned Subcategory
"Wi-Fi", "Internet"	Network	Wireless
"Projector", "Screen"	Hardware	Audio/Visual
"Password", "Login"	Software	Access/Authentication
"Slow", "Freeze"	Hardware	Computer

Project Outcomes

Measurable improvements for the IT helpdesk

100%

Automated Routing

For known keyword incidents.

0

Manual Sorting Errors

Consistent classification logic.

24/7

Instant Processing

No waiting for IT staff availability.
