Project Design Phase
Problem – Solution Fit Template

Date	02 October 2026
Team ID	SWTID-2026-8115
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why.

Purpose:

- Solve complex problems in a way that fits the state of your customers.
- Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- Sharpen your communication and marketing strategy with the right triggers and messaging.
- Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- **Understand the existing situation in order to improve it for your target group.**

Template (Canvas Details):

Canvas Element	Project-Specific Details
1. Customer Segment(s)	IT Support Staff, Helpdesk Agents, and End-Users (Students/Faculty).
2. Customer Limitations	Limited IT staff resources, high volume of requests during peak times, manual sorting causing bottlenecks.
3. Available Solutions	Manual ticket sorting, basic email routing rules, or hiring additional Tier 1 support staff.
4. Jobs To Be Done / Problems	Categorizing incoming IT issues (hardware, software, network) and assigning tickets to the correct resolver group quickly without human intervention.
5. Current State	High backlog of unassigned tickets, slow initial response times, and frustrated end-users waiting for basic routing.
6. Behavior	End-users often submit multiple tickets for the same issue out of frustration; IT staff spend hours daily just reading and routing tickets.
7. Triggers	System outages, password resets, onboarding periods for new students/staff, and beginning

	of semesters.
8. Emotional Motivation / Status	Users feel delayed and ignored; IT support staff feel overwhelmed by repetitive administrative tasks rather than technical troubleshooting.
9. Your Solution	A ServiceNow Flow Designer workflow that automatically categorizes, prioritizes, and routes incoming tickets based on keywords, impact, and urgency.
10. Channels of Behaviour	ServiceNow IT Service Portal, Email-to-Ticket creation, and integrated communication platforms (e.g., Microsoft Teams).
