NAAN MUDHALVAN PROJECT

Auto Ticket Classification using Flow Designer

No-code ServiceNow automation for a school IT helpdesk

Problem and Objective

From manual sorting to automatic classification

IDEATION & REQUIREMENTS PHASE

Before: manual process

- Daily unclassified requests.
- Manual category selection.
- Time-consuming sorting.
- High error rate.

After: our objective

- Automatic incident classification.
- Reduced manual IT effort.
- Improved ticket routing efficiency.
- No-code maintenance.

Proposed Solution Parameters

Key structural definitions of our project idea

PROJECT DESIGN PHASE

1. Problem Statement

Manual, time-consuming routing of unclassified IT requests causing resolution delays.

2. Solution Description

Automated keyword-based ticket classification using ServiceNow Flow Designer.

3. Novelty / Uniqueness

100% no-code configuration replacing complex, rigid script-based routing.

4. Social Impact

Faster incident resolution for end-users and significantly reduced IT staff burnout.

5. Business Model

High internal cost savings achieved through drastically improved operational efficiency.

6. Scalability

Highly scalable by simply adding new keyword rules without developer intervention.

Project Planning Phase

Product backlog, sprint schedule, and estimation

PROJECT PLANNING PHASE

Epic	User Story / Task	Priority	Pts
Registration	Register via email and password	High	**2**
Registration	Receive confirmation email	High	**1**
Registration	OAuth (Facebook / Gmail)	Med	**4**
Login	Login via email and password	High	**1**

TARGET VELOCITY

20

Story points / sprint

Based on 10-day sprint at 2 points per day.

SPRINT 1 TRACKER

Duration	**6 Days**
Completed	**20 Points**

Technical Implementation

Keyword-based classification logic in Flow Designer

PROJECT DEVELOPMENT PHASE

1

Ticket created

Student enters Caller and Description.

2

Flow triggers

Record created with empty category.

3

Keyword check

Description matches predefined rules.

4

Auto-classify

Category and subcategory assigned.

5

Email sent

Caller receives confirmation mail.

Project Outcomes

Measurable improvements for the IT helpdesk

DOCUMENTATION PHASE

100%

Automated Routing

For known keyword incidents.

0

Sorting Errors

Consistent classification logic.

24/7

Instant Processing

No waiting for IT staff availability.

Thank You

All project documentation and flow deliverables have been successfully uploaded to the GitHub repository.
