PROJECT DESIGN PHASE

Solution Architecture Goals

Bridging the gap between business problems and technology solutions.

Solve Problems

Find optimal technological solutions for business needs.

Describe Structure

Explain system behavior and traits to stakeholders.

Define Requirements

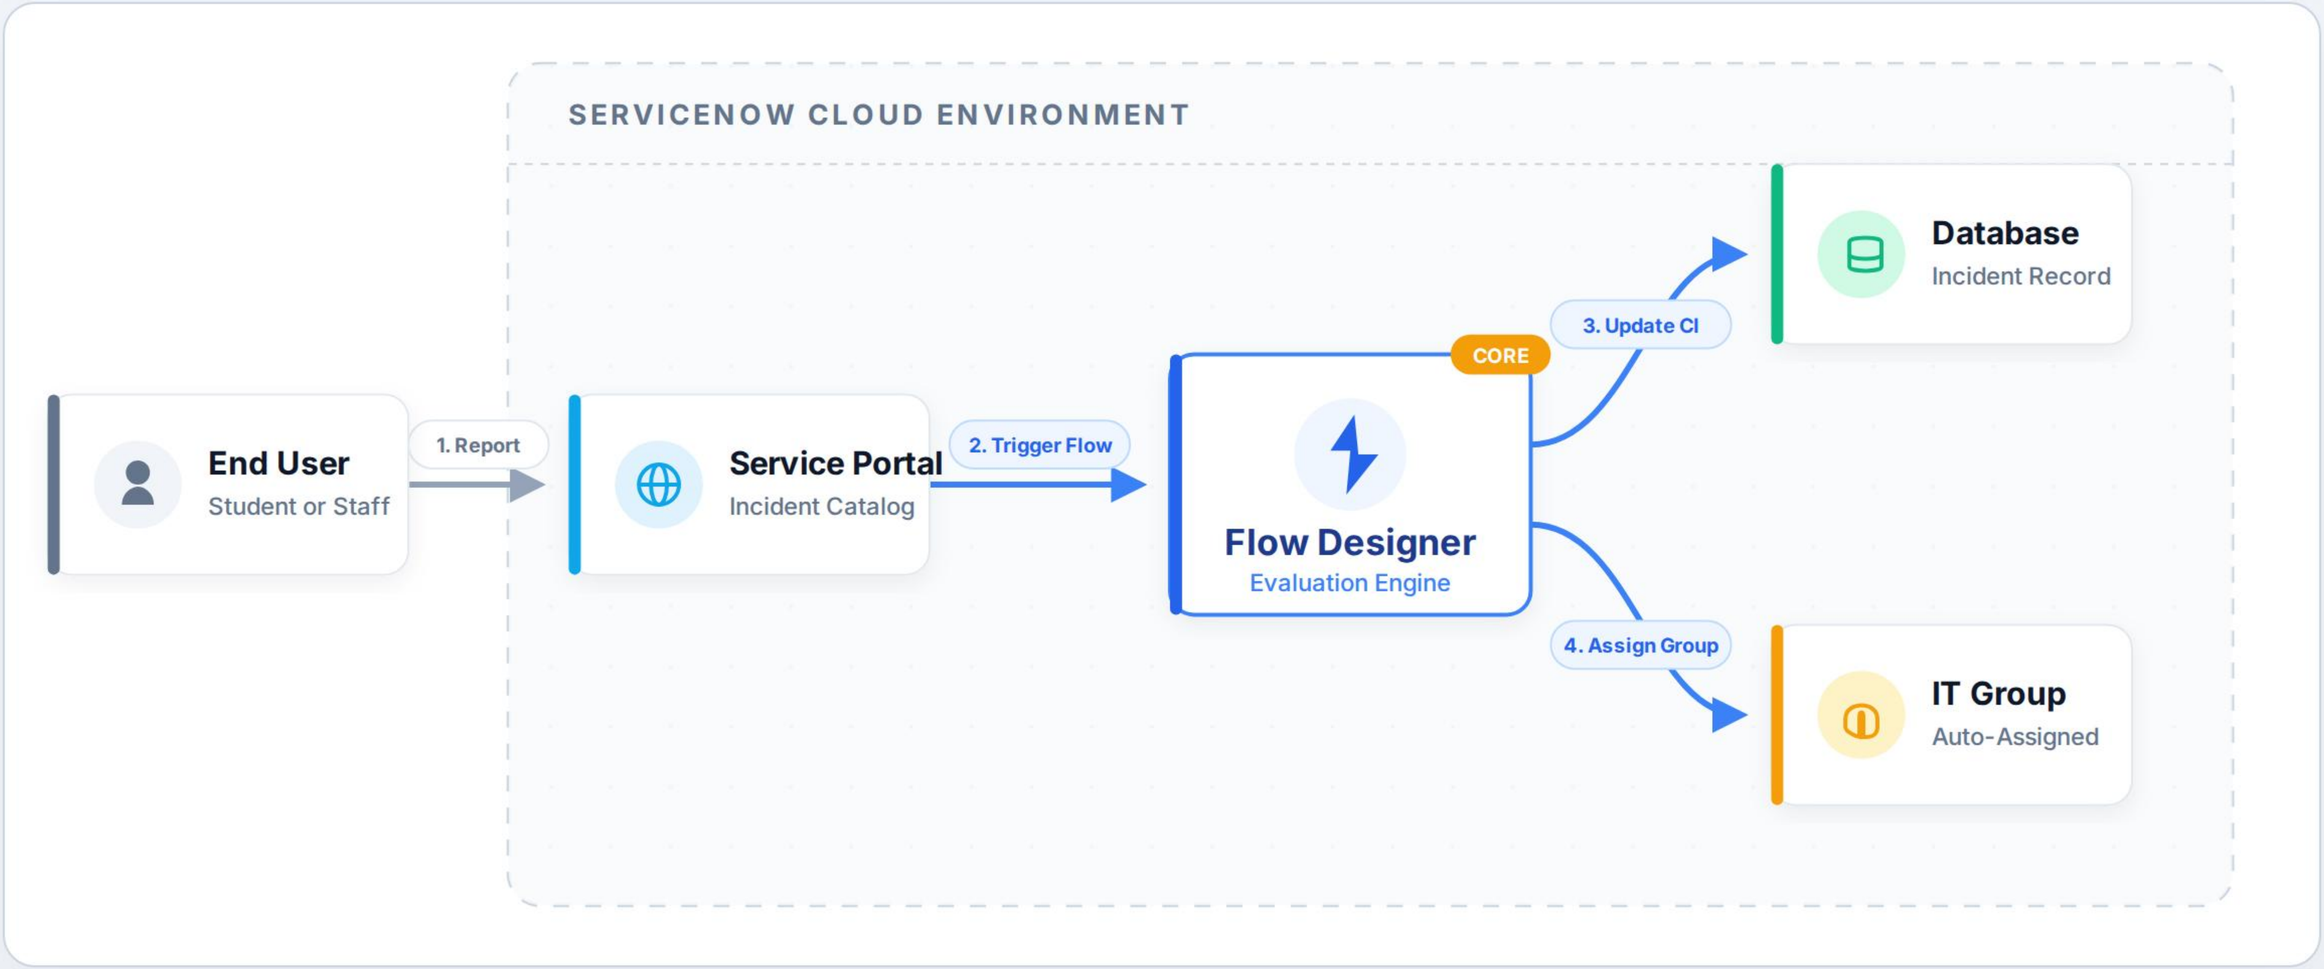

Map core features and development phases.

Provide Specifications

Guide solution management and final delivery.

Architecture Data Flow

End-to-end incident lifecycle using ServiceNow Flow Designer.

Auto-Classification Logic

Explanation of the Flow Designer processing steps.

Trigger

1

- Record created.
- Target table: Incident.
- Portal submission captured.

Condition

2

- Evaluate Category field.
- Check Urgency level.
- Determine required IT unit.

Action

3

- Update Incident record.
- Set Assignment Group.
- Bypass manual triage.

Project Impact & Value

Optimizing the school IT helpdesk through intelligent routing.

Zero

Manual triage steps required.

Instant

Ticket routing and assignment.

100%

No-code implementation.
